Deputy Director (Media), NDMA

Dated: 08 June 2017

MONTHLY OUTLOOK FOR JUNE 2017

Large uncertainty prevails in the global models about evolution of El Niño during Monsoon Season 2017. Positive phase of Indian Ocean Dipole is likely to dominate throughout the summer season. These forcing play an important role in modification of the seasonal weather in the region.

Outlook for the month of June 2017, has been prepared based upon regional and global weather conditions incorporating the climate system dynamics. Following are the highlights of weather in June 2017:

- Northern half of the Country is expected to receive more precipitation than the southern half.
- Three-four spells of thunderstorm-rain and isolated hailstorms associated with windstorm are predicted in Upper Punjab, AJK, KP and adjoining areas of Gilgit-Baltistan. Hot and dry conditions, with chances of dust/thunderstorms, will prevail in the southern half of the Country.
- **Due to intense heating, temperatures in the southern half of the Country are likely to remain slightly above normal.**

Note: Keeping in view the rapid changes in climate system dynamics, above outlook will be updated on monthly basis during the first week of each month.
