

Heavy Rainfall and Snow in the North-western regions of Iran

Valid: 30-31 December 2025

Affected Areas

Tabriz, Songhor, Kamyaran, Kermanshah, Harsin, Kerend-e-Gharb.

Hazard Types

Heavy rainfall/heavy snowfall, flooding.

Summary

Northwest Iran is experiencing significant rainfall and snowfall, leading to hazardous conditions across the region. Heavy rain may cause localized flooding, particularly in low-lying areas and along rivers, while snow accumulation in mountainous areas can disrupt transport and increase the risk of avalanches. Travel delays, road closures, and power interruptions are possible, and residents are advised to take precautions.
