

Heavy Rainfall & Flood Risk (Syria)

valid; next 24-72hours till 1st january 2026

Affected Areas

Western and Northwestern Syria includes atakia, Baniyas, Tartus, Idlib, and Maarrat al-Numan, and Antakya turkey

Hazard Types

Heavy Rainfall and flooding in Syria

Hazard Summary

A strong weather system is bringing **heavy to very heavy rainfall** over western and northwestern Syria.

The **highest risk areas** include **Latakia, Baniyas, Tartus, Idlib, and Maarrat al-Numan**, where **flash floods and landslides** are likely.

Moderate impacts are expected over **Aleppo, Hama, Homs, Manbij, and Dayr Hafir**.

Urban flooding may occur due to intense rainfall and poor drainage, especially in low-lying areas.

Residents are advised to avoid flood-prone zones, wadis, and mountainous terrain and follow local advisories.
