

January 20th, 2025

Global Alerts – West Zone

Winter storm warning

Affected Areas

Manitoba, Ontario,

Duration

January 20-22, 2025

Hazard Types

Extreme cold puts everyone at risk.

Snowfall: In hilly and mountainous terrain.

Hazard Summary

Wind chill values between minus 45 and minus 50 are expected at times until Tuesday morning. Risks are greater for young children, older adults, people with chronic illnesses, people working or exercising outdoors, and those without proper shelter. Watch for cold related symptoms: shortness of breath, chest pain, muscle pain and weakness, numbness and colour change in fingers and toes. Cover up. Frostbite can develop within minutes on exposed skin, especially with wind chill. Keep emergency supplies in your vehicle such as extra blankets and jumper cables. If it's too cold for you to stay outside, it's too cold for your pet to stay outside. Extreme cold warnings are issued when very cold temperatures or wind chill creates an elevated risk to health such as frost bite and hypothermia.
