

January 17, 2025

### Blizzard & Snowfall warning (Canada)

#### Affected Areas

Edmonton, Calgary (Canada)

#### Duration

January 17-18, 2025

#### Hazard Summary

Winds gusting to 90 km/h will develop Saturday. The strongest winds will occur east of the terrain, beginning in the morning and peaking in the afternoon. These winds will weaken on Thursday night. Gusty winds can damage soft shelters, tents and awnings at outdoor events. High winds may toss loose objects or cause tree branches to break. Motorists, especially in high profile vehicles, may expect hazardous driving conditions on highways subject to strong cross winds. Be prepared to adjust your driving with changing road conditions due to high winds.
