

## Winter Storm Impacting Northeastern North America

Valid: 8–21 January 2026

### Affected Areas

Northeastern US (New York, Boston, Syracuse, Rochester, Buffalo); southeastern Canada (Ontario, Quebec, New Brunswick, Nova Scotia, Newfoundland)

### Hazard Types

Heavy snow (10–40+ cm), strong winds, blowing snow/low visibility, travel/power disruptions, Major River Flooding.

### Hazard Summary

Deep low-pressure system (central 995–1000 hPa) tracks from Great Lakes to Atlantic, bringing heavy snow and gusty winds. Northeast US and southeastern Canada expect 10–40 cm snow with highest totals in higher ground, heaviest rates Thursday-Saturday; blowing snow reduces visibility. Ice in southern/mixed zones.
