It is expected to be cloudy with isolated rain in some parts of IIOK

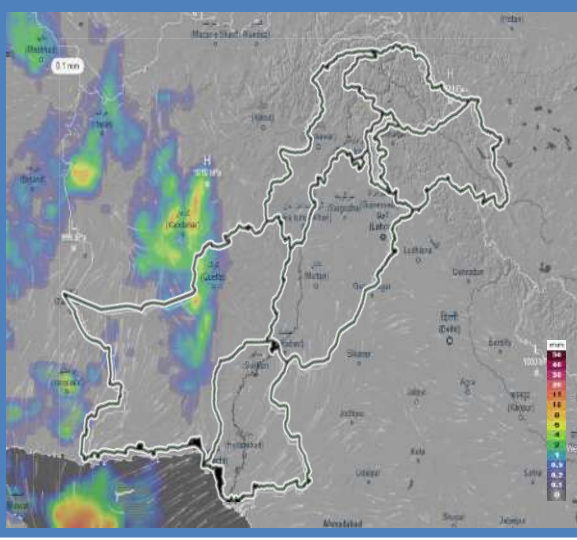

1st May 2024

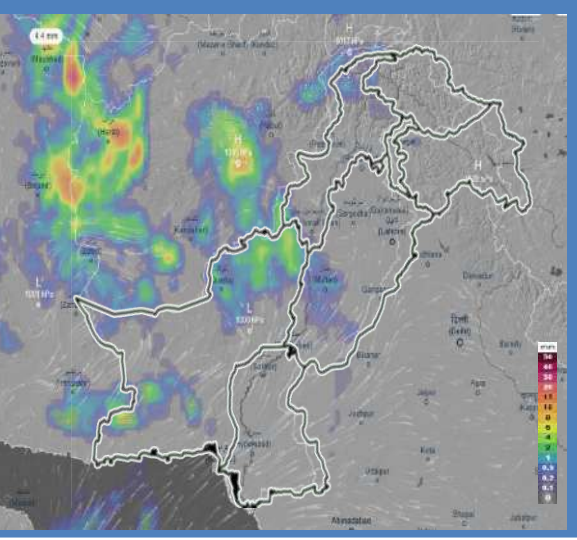

2nd May 2024

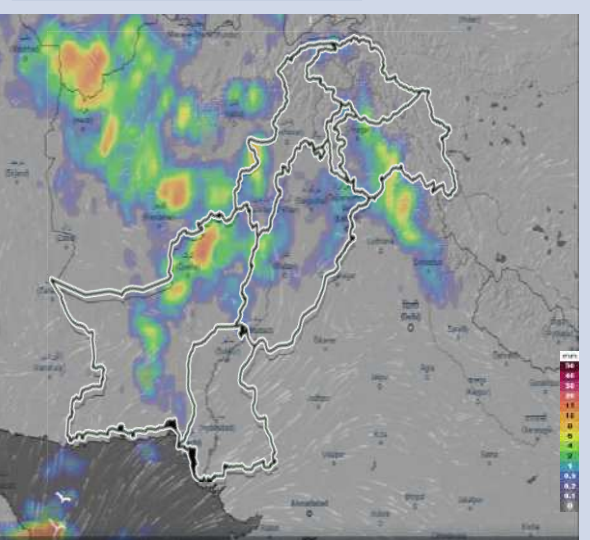

3rd May 2024

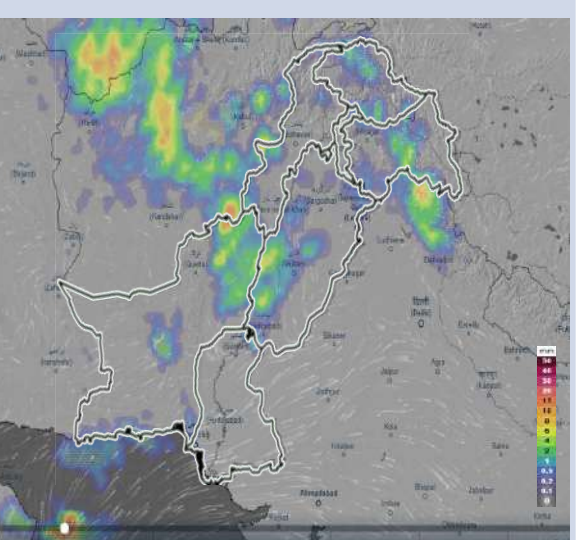

4th May 2024

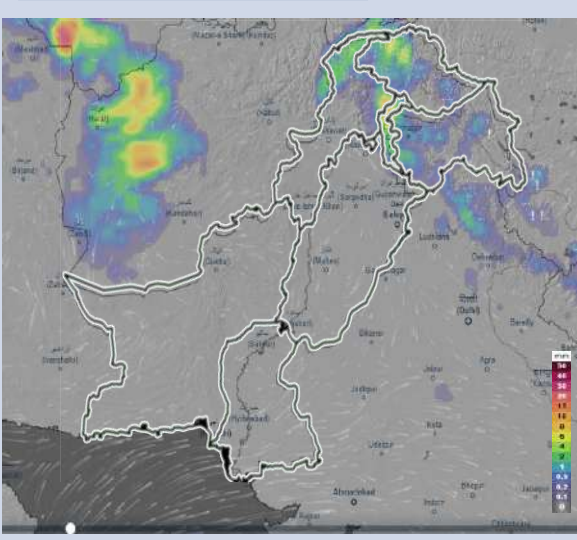

5th May 2024

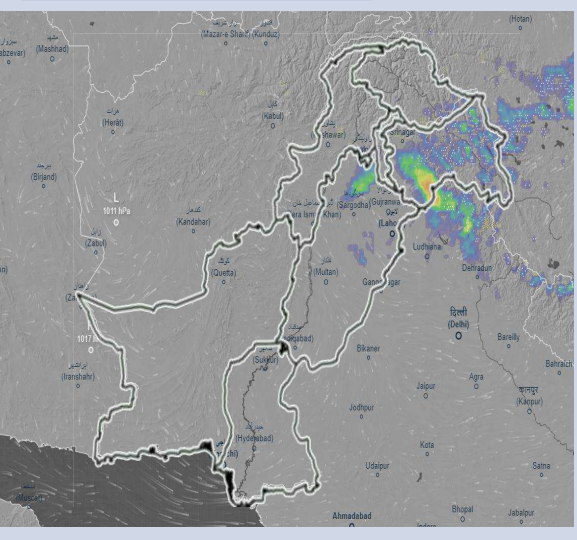

6th May 2024

7th May 2024

8th May 2024

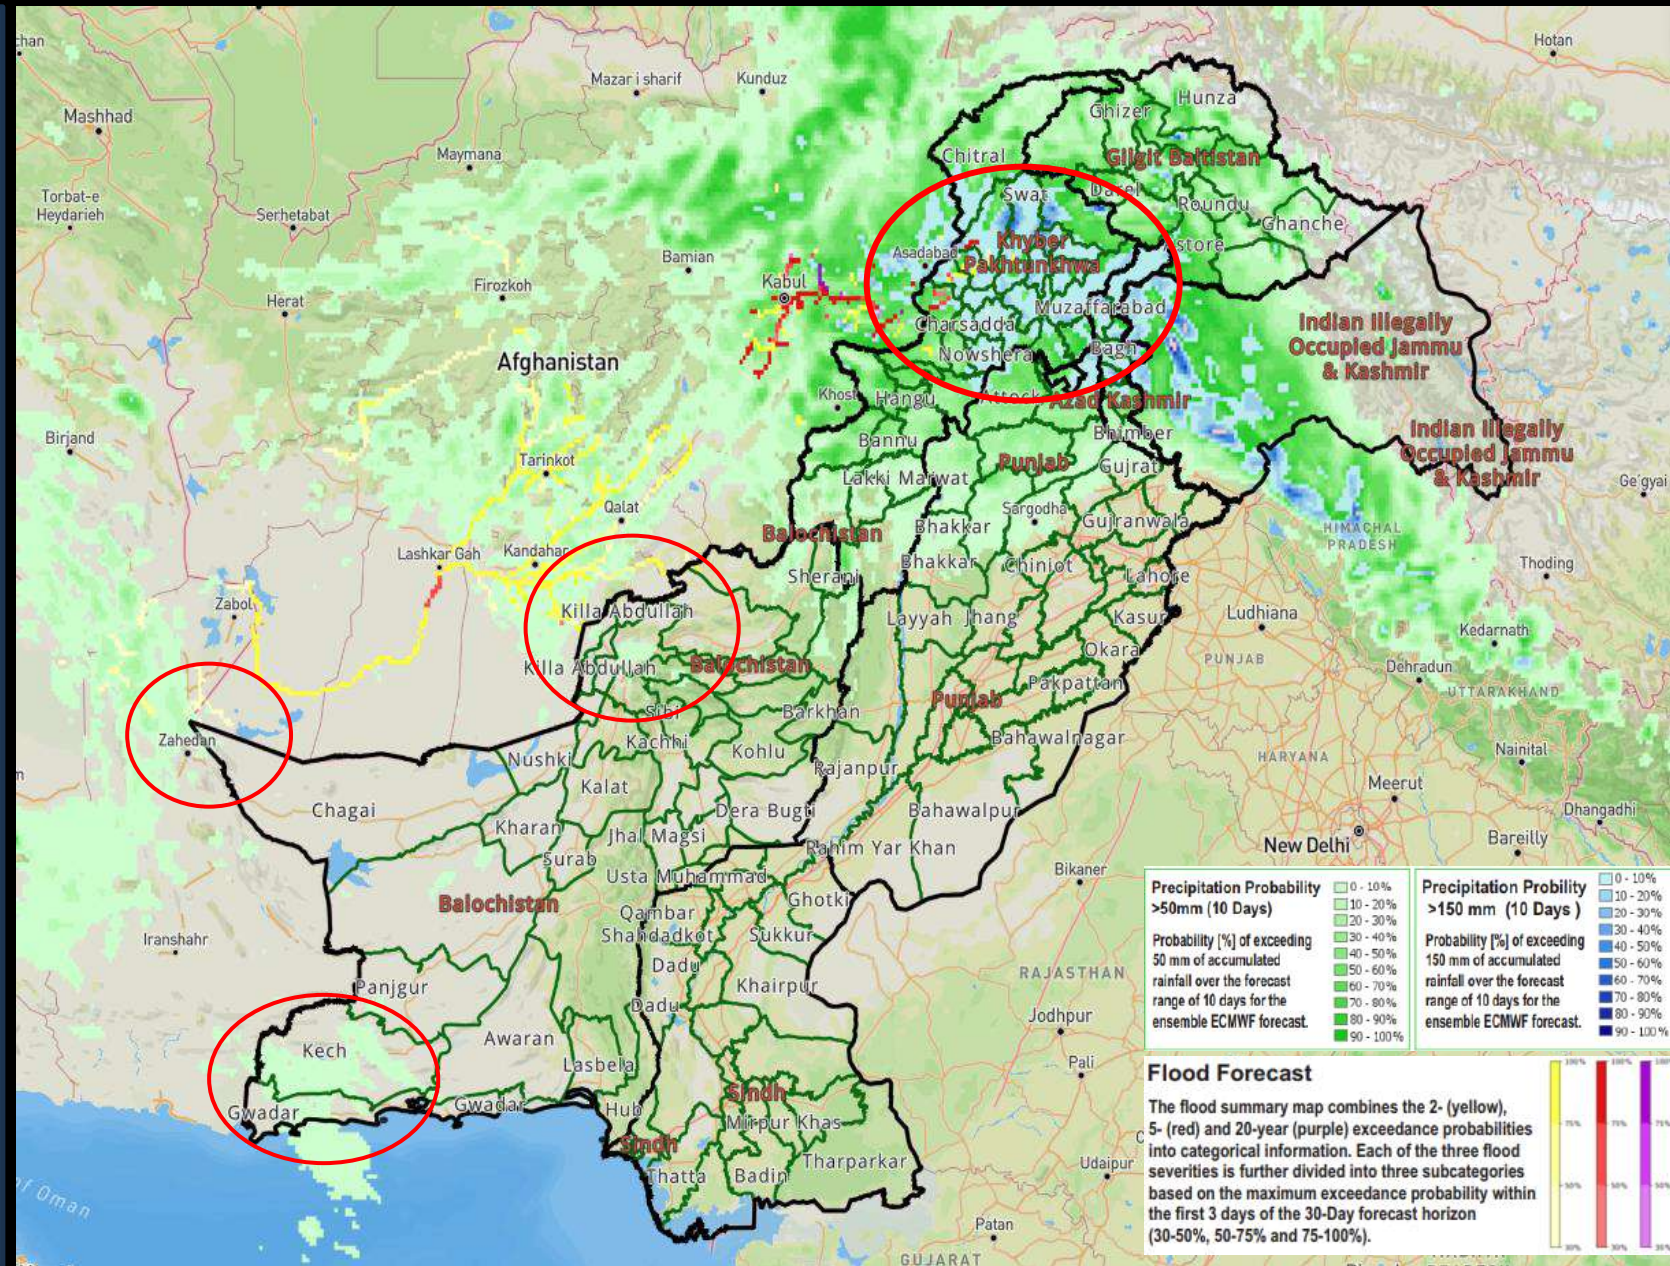

Likely Exposed Areas for Flash Flooding 01 May-08 May 2024

Potential Impact:

- **Light to moderate rains** are expected that may trigger **flash flooding** in local nullahs/streams of Balochistan especially (Gwadar, Kech, Washuk, Chagai, Chaman, Killa Abdullah, Killa Saifullah & Zhob) & flash flooding in highlighted areas of Khyber Pakhtunkhwa & AJK.
- Moderate rainfall may generate flash flooding in **hill torrents** of DG Khan and Rajanpur.
- Localized flooding may **disrupt roads** during the forecasted period.
- Local residents & tourists are advised to avoid **unnecessary traveling** and are advised to remain cautious during the spell and check weather updates before traveling.
- Electricity/ other utility services may get disrupted.

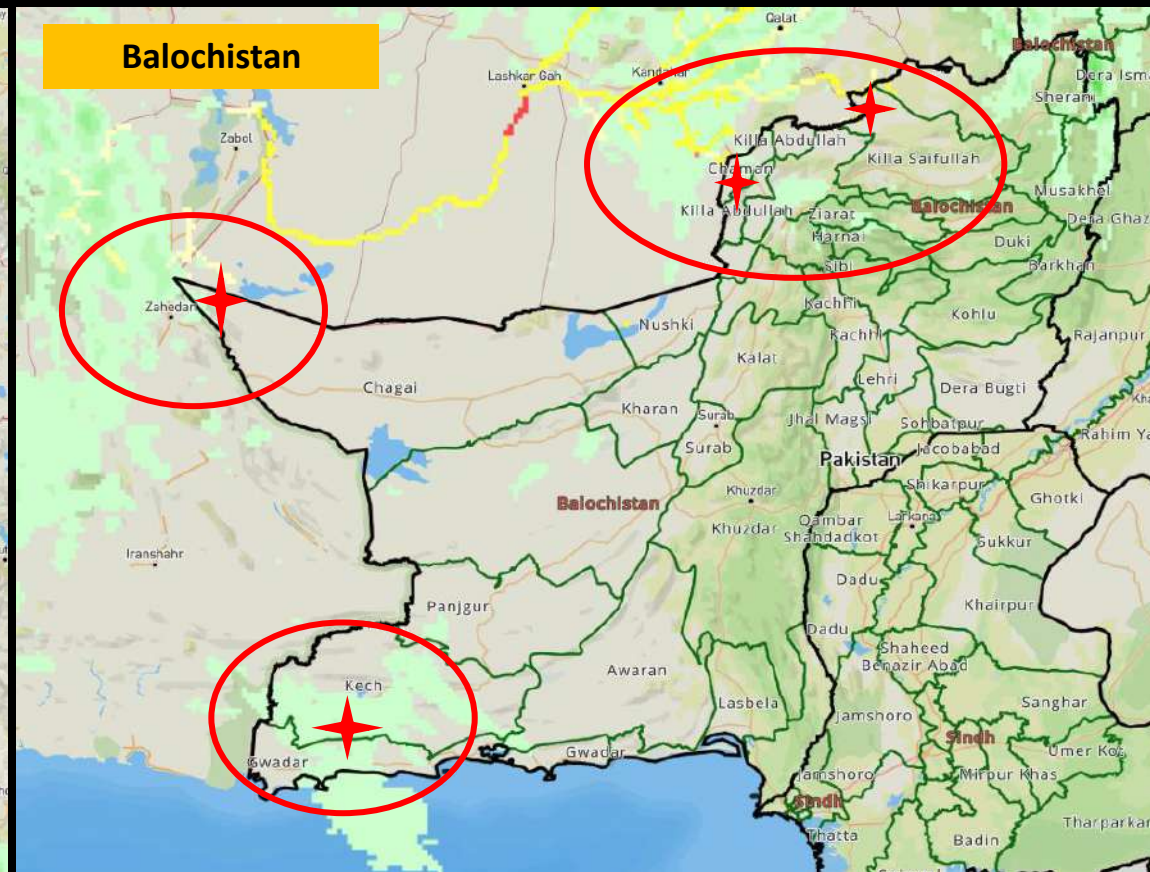

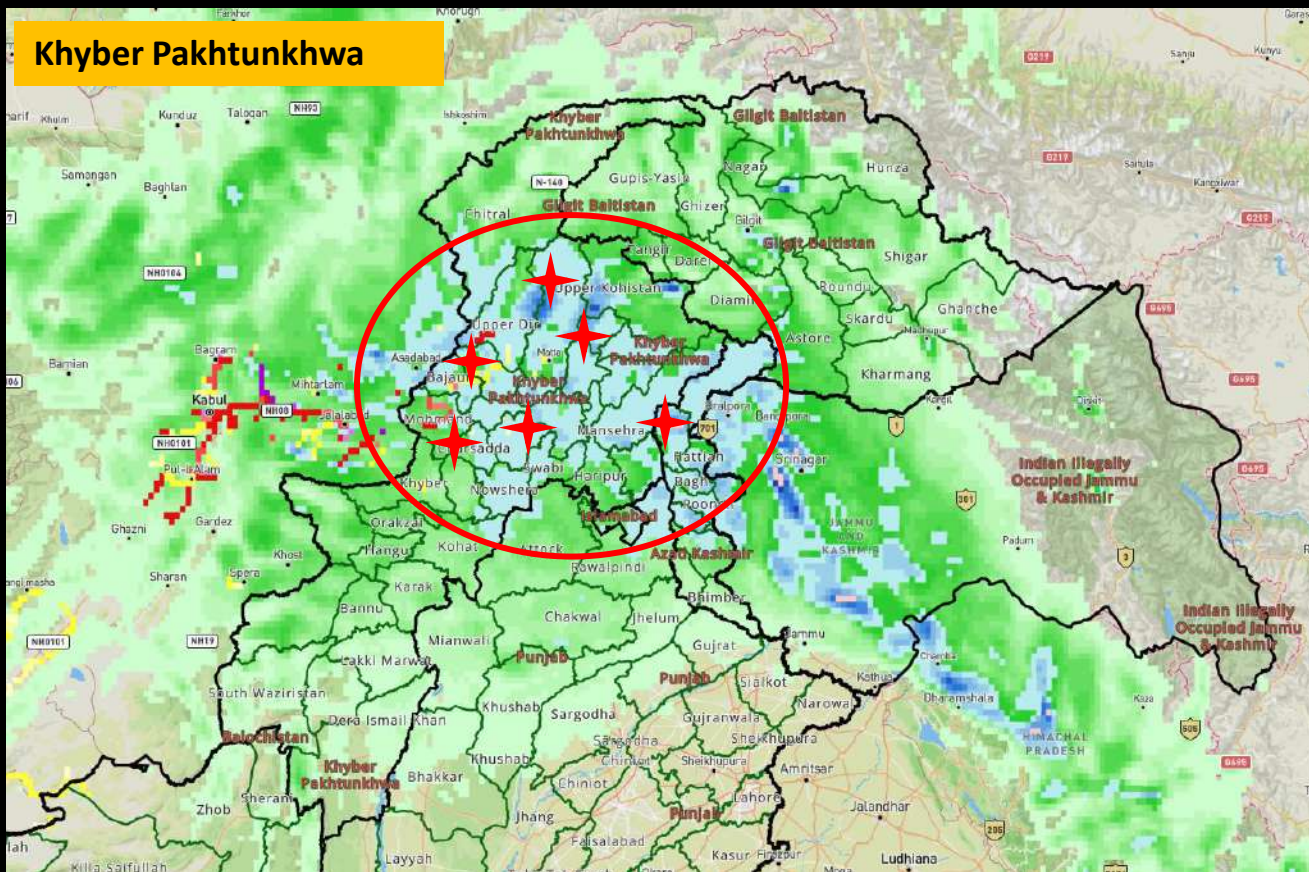

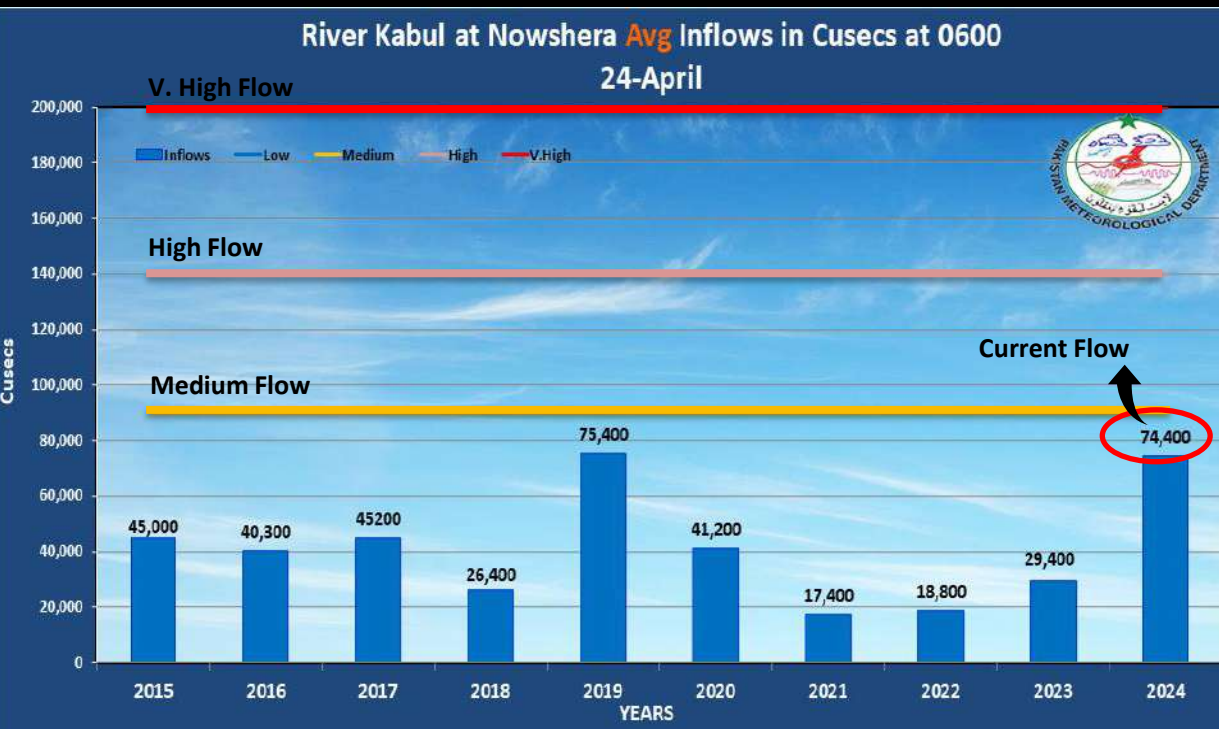

Likely Exposed Areas for Flash Flooding 01 May-08 May 2024

Light to moderate rainfall is anticipated so River Kabul at Nowshera and its tributaries are likely to remain in rising trend with **Low to High Flood levels** during the forecast period. These rains are likely to cause a surge in water levels within streams and nullahs especially (Dir, Malakand, Charsadda, Swat, Mardan, Bajaur, Mohmand & Khyber Agency)

Light to moderate rainfall may generate flash flooding in local nullahs/Streams of Balochistan specially (Gwadar, Kech, Washuk, Chagai, Chaman, Killa Abdullah, Killa Saifullah & Zhob) and low lying surrounding areas.

- **River Kabul** at Nowshera is likely to remain in rising trend with **Medium to High Flood levels** during the forecast period. Current Flood Level at Nowshera **75,000 cusec** which is expected to reach above **130,000 cusec** from 02nd to 06th May 2024.
- **River Swat** is also expected to show **rising trends** in the forecast period with discharge reaching up to **50,000 cusecs** at Munda headwork.
- **River Mingora** is expected to **show rising trends** with discharge reaching up to **35,000 cusecs**.
- All the **main rivers of Indus River System** (Indus, Jhelum, Chenab, Ravi, Sutlej) are expected to flow with **normal discharges**.
