

Heavy Rainfall/Flash Flooding in New York

Affected Areas

Hudson Valley, New Jersey, Albany, Hartford, Worcester and New York City

Duration

July 31- 2nd August 2025

Hazard Types

Intensive Rainfall/Flash Flooding

Hazard Summary

A strong cold front is causing heavy rain and flash flooding across NYC, Long Island, Hudson Valley, New Jersey, and Connecticut. Up to 5+ inches of rain have fallen, flooding roads, subways, and causing major flight delays.

Three deaths have been reported so far, with emergency rescues ongoing. Flood Watches and Flash Flood Warnings remain in effect.

Residents should stay indoors, avoid flooded roads, and move to higher ground if in basement or low-lying areas.
