

WEST ZONE Extreme Cold Warning Canada

Location: Canada

Hazard Type: Cold warning

Intensity: Moderate to Heavy

Expected Time of Occurrence: 4th – 7th February 2025

Hazards:

Extremely cold wind chill values of minus 40 to minus 45 are expected or occurring. Temperatures will moderate somewhat during the afternoon hours, however, night time and morning wind chills near minus 40 or colder will continue into Wednesday morning for some areas. Extreme cold puts everyone at risk. Risks are greater for young children, older adults, people with chronic illnesses, people working or exercising outdoors, and those without proper shelter. Frostbite can develop within minutes on exposed skin, especially with wind chill. If it's too cold for you to stay outside, it's too cold for your pet to stay outside.
