

## Cyclone Fengal Alert in India

**Country:** India

**Hazard Type:** Cyclonic Storm

**Intensity:** Moderate to Severe

**Expected Time of Occurrence:** November 29, 2024 - December 2, 2024

### Key Details:

**Rainfall Probability:** The coastal districts of Tamil Nadu, Puducherry, and parts of Andhra Pradesh are likely to experience heavy to extremely heavy rainfall, with some areas expected to receive over 200mm of precipitation during this period.

**Winds:** Sustained winds are forecast at 50-60 km/h, gusting to 70-85 km/h, especially along the northern Tamil Nadu and Puducherry coasts.

**Path and Impact:** Cyclone Fengal, currently over the Bay of Bengal, is moving north-northwest and expected to intensify into a cyclonic storm before weakening as it crosses the Tamil Nadu-Puducherry coast between Karaikal and Mahabalipuram by November 30, 2024. Coastal flooding and rough seas are anticipated in low-lying areas.
