

July 10, 2025

## Global Alerts - East Zone

### Tropical Storm Bising – China

#### Affected Areas

Zhejiang, Fujian and Guangdong

#### Duration

July 10-11, 2025

#### Hazard Types

Heavy rainfall particularly in coastal areas of Zhejiang, Fujian and Guangdong

#### Hazard Summary

Tropical Storm Bising is located 311 km north-northwest of Taipei, Taiwan, and has tracked west-southwestward. Infrared imagery shows a steady trend of warming cloud tops and dissipating convection sheared to the south, consistent with the decay expected now that the low-level circulation center has made landfall. Deterministic and ensemble models agree the system will continue to decay and track generally southwestward, remaining over land until it fully dissipates in 24 hours.
