

Heavy Rainfall/Flood – Myanmar

Affected Areas

Ayeyarwady River Basin, Yangon–Thanlyin–Tanintharyi as well as northern highlands

Duration

July 15-20, 2025

Hazard Types

Heavy rainfall and induced flash flooding

Hazard Summary

Over the next 7–10 days, the greatest flood risks are centered in the Ayeyarwady–Chindwin basin and the southern coastal region (Yangon to Tanintharyi). ECMWF and GloFAS point to strong rainfall and high river discharge signals in these areas.
