

26 February, 2026

Rainfall & Flood Risk Forecast - Brazil

Valid: 26 Feb – 02 March 2026

Affected Areas

Brazil including northern Amazon states, central regions (e.g., Mato Grosso, Goias), and southeastern states (e.g., Minas Gerais, Rio de Janeiro, Sao Paulo).

Hazard Types

Heavy Rainfall, Thunderstorms, Flash Flooding, Riverine Flooding

Hazard Summary

Forecast indicates ongoing widespread rain and periodic bands of moderate to intense showers across several Brazilian regions during the given period. These rain bands are expected to bring frequent rain periods and localized heavy downpours, particularly in northern Amazon and central Brazil, as well as in parts of the Southeast. There is an elevated risk of flash flooding, increased river levels, and urban inundation, especially in areas with saturated ground or constrained drainage.
