

10 February, 2026

## Heavy Rainfall & Flood - Colombia

Valid: 11 – 15 February 2026

### Affected Areas

Northern Colombia (Caribbean coast), Pacific coast (Chocó, Nariño), Andean region (including Antioquia, Cundinamarca, Bogotá), and parts of the Amazon basin.

### Hazard Types

Heavy Rainfall, Flash Flooding, Riverine Flooding, Landslides

### Hazard Summary

Forecast models indicate persistent moderate to heavy rainfall across western, northern, and central Colombia during the given period. Repeated rain episodes may lead to localized flooding, rapid river level rises, and landslides in mountainous terrain, particularly where soils are already saturated. Urban flooding is also possible in low-lying and poorly drained areas.
