

1 February, 2026

Heavy Rainfall – Central Chile

Valid: 01 – 05 February 2026

Affected Areas

Santiago Metropolitan Region, particularly Maipú, and adjoining urban localities in Central Chile.

Hazard Types

Heavy Rainfall, urban flooding

Hazard Summary

An intense short-duration rainfall event associated with a frontal weather system triggered urban and flash flooding across parts of the Santiago Metropolitan Region. Sudden heavy downpours overwhelmed drainage systems, resulting in inundation of streets and low-lying residential areas. Localized flooding impacts persisted into 01 February 2026, causing disruption to transport and daily activities.
