Avalanches in Norway

Affected Areas

Stavanger, Bergen, Ålesund, Trondheim, Mosjøen, Bodø.

Duration

Mar 3 – March 8, 2026

Hazard Types

Snowfall, Freezing rain, Avalanches

Hazard Summary

In Norway, snowfall is widespread along the western and central coastal belt, extending into northern parts as well. The snowfall along with freezing rain and intermittent strong winds are expected for the next five days. The above-mentioned conditions together with the local temperatures can destabilize the snowpack which poses a high risk of avalanches.
