

April 28, 2025

Heavy Rain in Tanzania

Affected Areas

Tanzania and Madagascar

Duration

April 28, 2025

Hazard Summary

Veld fire conditions are currently severe in parts of southern Africa, especially in South Africa's Western Cape region, with the Fire Danger Index (FDI) exceeding 75, indicating an extreme risk. Residents and travelers are advised to avoid open flames, remain vigilant, and follow any evacuation orders issued by local authorities. High temperatures, strong winds, and dry vegetation are making fires more likely to start and spread rapidly.
