

Turkey Flood and Heavy Rain Update

Affected Areas: Coastal areas of Southern part of Turkey

Hazard type: Urban Flooding

Intensity: Low to Moderate

Duration: 24 December to 27 December, 2024

Hazard Summary

Heavy rainfall exceeding 100mm is forecast in Antalya, Izmir, and parts of Konya over the next 72 hours, posing a high risk of urban flooding and river overflows at chokepoints. Low-lying areas are likely to experience severe waterlogging, while steep terrains face a heightened risk of landslides. Critical infrastructure, including roads and drainage systems, may be overwhelmed, disrupting transportation and essential services. Immediate action is required to mitigate impacts and ensure public safety.
